

## How to setup P2P access on PRO-VIEW using SoCatch app

First install the SoCatch app; this can be found from the Google Play Store or the iOS App Store.

- 1) Right click on the recorder and select “configure”

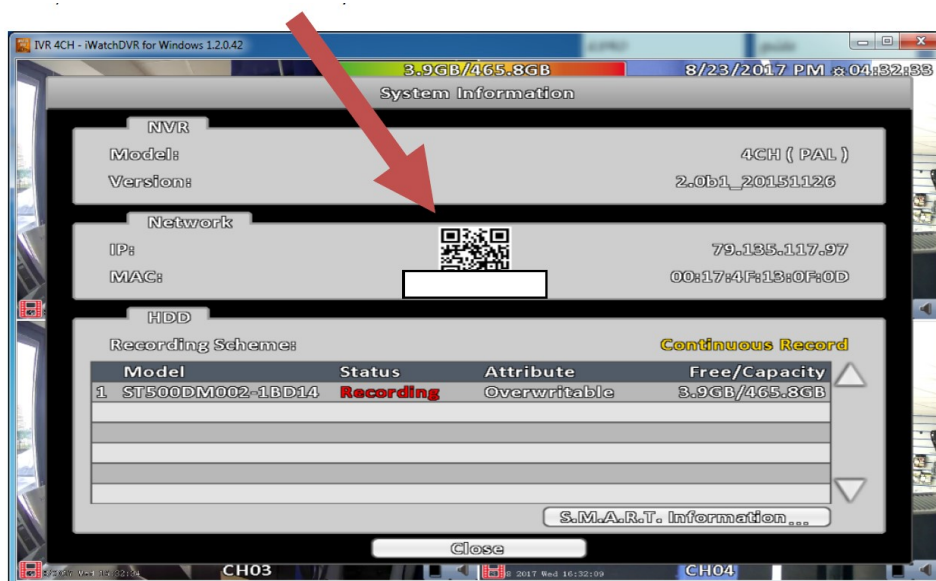

- 2)
- 3) In this menu, select “system information”. You may be prompted to enter the password (123456 by default)

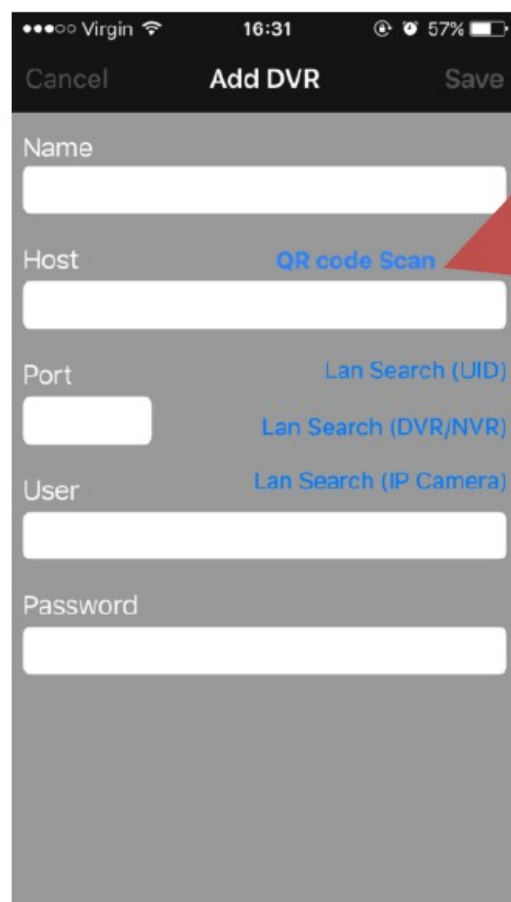

- 4)

5) You can now see the P2P key.

6)

7) Now open the SoCatch app on your mobile device, select the + icon in the top right. You will now see "QR code Scan". Press this, allow access to your camera and scan the code.

8)

- 9) This will then enter the Host details automatically.
- Type in a nick name for what you would like to recognise the system.
  - Enter HTTP Port details – 80 is the default
  - Now enter the user and password details (these are settings used to access the CCTV system)
  - Once done, press “Save” in the top right corner.** Now in the device list, you will see your recorder. Tap on this and it will load up your CCTV images.
  - Please note the below settings when setting up CCTV system on the SoCatch app if you run into issues**
  - The default User and password for CCTV system will be (User- admin/Password- 123456)**
  - Please note if using the default port settings this can be check or changed to see what Port settings are currently being used, go to Network Setup options**
