Hik Vision Firmware update using iVMS
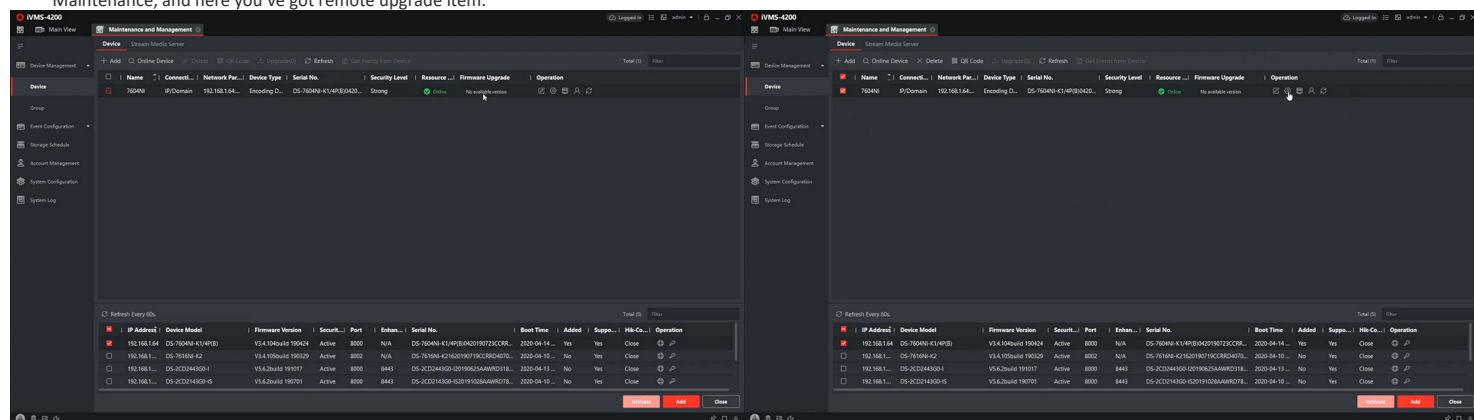

21 January 2021   10:17

1. Download your required firmware from the Hik Vision Portal -
   http://www.hikvisioneurope.com/uk/portal/
2. **In the IVMS-4200** we need a device management tab.
3. **Locate your device** and now go into device remote configuration, and for that – press
   the cog button on the right of the device' line, and from there go to System → System
   Maintenance, and here you've got remote upgrade item.

3. Now let's press dots icon and locate the downloaded firmware file **digicap.**dav . From
   there just press upgrade, you will see this prompt, saying that after the update device
   is going to reboot and that's fine, OK. After this process is done – you can continue
   working with your NVR or DVR just like you did before, but running a new firmware.
   That's it.
