

## Enabling Virtual Host on Hikvision NVR

**Step 1.** Login to the web page of the NVR by the IP address of your NVR followed by the HTTP port (as shown in the picture below). Your IP address may be different from the one pictured.

**Note:** If you do not know the LAN IP of your NVR, use Hikvision SADP Tool, which can be downloaded. It scans your network for any Hikvision devices that are connected and allows you to see and/or change their network settings, including the internal IP.

**Step 2.** Go to Configuration > Network > Advanced Settings> Other and **Enable Virtual Host**. When you click 'Save' your NVR will reboot.

**Step 3.** Navigate to the **Camera Management window** (Configuration > System > Camera Management). You'll notice that the connect tab links to each camera directly.

Channel No.	Camera Name	IP Address	Channel No.	Management Port	Security	Status	Protocol	Connect
D1	Camera 01	10.41.8.54	1	8000	Weak	Online	HIKVISION	<a href="http://10.41.8.54:8000/">http://10.41.8.54:8000/</a>
